They can also be used with GIS (geographic information systems) software, photogrammetry, and other applications. History The history of AutoCAD is closely tied to that of CAD and the drafting profession. CAD is the end result of the computer revolution in drafting. The field of architectural drafting has been associated with the discipline of architectural design since the early 19th century. Architecture became a profession with the advent of mass-produced building materials and concrete in the late 19th century. More and more designers needed to draw and label in order to produce building blueprints for construction. In the mid-19th century, Eugène Bouchot, an engineer, developed the first mechanical drafting machine, called the hydrostatic copy machine, which was able to copy drafting from a mechanical drawing onto a transparent sheet of glass. This machine was intended for use by architects, engineers, and draftsmen. A drafting machine was first produced in the United States in 1883, although this machine was not widely adopted until the 1890s. This early machine could only copy from a two-dimensional drawing and used a mirror system to project the design onto the glass drawing. The first CAD program was called Draft, and it was developed by Charles Williams and Alan Evans and was based on their earlier creation of a graph-pad drafting machine. It was first introduced in 1964. In the 1960s, Autodesk was founded by Bill Pitts, Doug Linder, and David Pogue in the San Francisco Bay Area. The company's first product was Draft. A few years later, the company created AutoCAD, a solid-block graphics system that allowed a draftsman to enter and edit a block model directly on the screen. AutoCAD was the first software application to include a 3D view, which gave a drafter the ability to see and edit three-dimensional shapes in a drawing file. AutoCAD was the world's first 3D CAD program. Over the next few years, AutoCAD grew from a simple, single-user app on mainframes to a multi-user, multi-platform app that ran on PC. In

AutoCAD Architecture AutoCAD Architecture (AIA) is a collection of AutoCAD extensions that create 3D building models. AutoCAD Architecture Extensions are accessed from the 3D modeling module of AutoCAD. AutoCAD Architecture is available for Autodesk's AutoCAD and AutoCAD LT as well as a number of non-Autodesk products including Bluebeam Revit, Metasys ARCHICAD, Arup, ESI's PlasCAD, Webdyn/Ziggo, and SketchUp. In addition, AutoCAD Architecture and similar products are available for use in Autodesk's Architectural Design Suite and Windchill, and in other products created by other companies, including ArchiCAD, Tekla, and Spaces. AutoCAD Architecture also is available for customization in CADDx. One of the original products created by Autodesk, this product was released in 2000 and built on the foundation of Autodesk's 3D building modeler, CADDx. AutoCAD Architecture allows users to import architectural drawings from other AutoCAD and other software packages into a 3D modeling environment. Autodesk also supports importing AutoCAD DWG drawings, electronic PDFs and DXF files into 3D building models. When importing a 3D model from other CAD software, the imported data is integrated into the 3D building model. Data comes from the following categories: Building envelope information Properties Area-specific properties Attachments Dimensions Views Design guides Params Notes Project Scene Status bar Geometry type When an architectural drawing is imported into the 3D building model, the following information is created: Base surfaces are generated. Projects are created. Workplanes are generated. Components are created. The new components include: Walls Floor slabs Roofs Sections and a1d647e40b

The United States is set to give India a waiver that would lift the US ban on defence sales to India On Tuesday, the State Department notified the Pentagon that it was not going to ban India from buying five-year-old F-18 fighter jets from the US. The US has banned the sale of the jets to India since 2015 after New Delhi conducted a nuclear test and India also helped Pakistan in that country's relations with the international community. This is the first waiver that the US has given to India since 1995 when the country had given a waiver to India in the wake of nuclear tests carried out by Pakistan. The State Department's notification to the Pentagon stated that the waiver will apply for five years. The State Department said that the waiver is in line with US laws, including the Arms Export Control Act and the Arms Export Control Act. In 2015, the US had banned the sale of two-and-a-half tonne general-purpose bombs to India.
