The choir members stayed all day yesterday in the same hotel with us to attend the graduation, so we were able to hang out together. It felt so good to catch up with them over dinner last night. I also have a healthy sense of perspective on these things - I don't take for granted that my kids will be with me and my husband for the rest of their lives, and I try not to expect too much from the future. ## What's New in the?

An improved user interface design on Autodesk.com lets you access more information about your drawing objects. You can now see the name of the objects that are linked to your current drawing, and you can also see objects and layers that are used in your drawing. You can also access layers and objects that are grouped together. Display Point Chaining: Save time and energy by quickly re-creating paths or lines. When you draw a path or line, AutoCAD displays the results immediately, rather than waiting for you to select the next step. This feature works with "display point" lines that you draw as part of a path. You can move or resize a display point to redraw a path, including the resulting display point line. You can then move or resize the display point to create a different line. This feature allows you to complete your work without continually resizing and repositioning the display point. Refresh: Reduce the number of files stored on your computer. You can now set the "maximum number of files in the drawing database." If this number is reached, AutoCAD automatically creates a new database on your computer. Once you save the drawing, the database is no longer in use and there is no longer a limit on the number of files that can be stored on your computer. Ability to install and use AutoCAD without a license. This means that when you buy or rent AutoCAD, you can download it to your computer and install it as a free trial. However, you can only use the trial version for 60 days, after which time you have to purchase a license or downgrade the software to a free trial. Find and Replace: Move selected blocks without cutting and re-aligning. The "Move Blocks" command is now available from the home ribbon. Once the blocks are moved, you can easily rearrange them or align them to a new location. Zoom functionality: View the entire drawing on a large display. You can now view the entire drawing by moving the viewport, and you can change the viewport size to fit a drawing on a large screen. New 2D and 3D views: Create three-dimensional drawings with a simplified 2D drawing environment. This view environment includes 2D drawing objects such as beams and hatches, as well as 3D drawing objects, which are usually found
