International Monetary Fund raised its global growth forecast for 2019 on Thursday but warned it remained uncertain whether the world is headed for a recession. IMF officials said that while domestic demand and activity had held up in most advanced economies, the outlook for trade, investment and global growth remained uncertain as the early effects of the disruption from the coronavirus pandemic had spread. The fund has now raised its forecast for global growth for 2019 from 3.3 to 3.5 percent compared with 2.9 percent in October and 2.7 percent in September. The increase comes after months of gloom over the prospects for growth and as trade tensions, among other issues, caused the first interest rate cuts in decades by central banks in recent weeks. Asia's first economy to reopen after lockdown readies for second wave The IMF said that activity in the world's leading economies had not stalled but warned the downturn was likely to persist into next year. The fund said an initial pick-up in Chinese activity after the lockdown was lifted in March was followed by a return to a "relatively normal pattern of lower growth". An accelerating rate of decline in global trade had also begun to drag on growth, the fund said.
