### **AutoCAD For Windows**

AutoCAD is used as a command line program Drawing features AutoCAD supports drafting tools such as straight lines, curved lines, and vector objects such as arcs, splines, circles, and ellipses. Different type of tools can be selected for drawing from toolbar of the program. The line tool allows drawing several lines with different line properties. Properties of these lines include line color, line width, line dash pattern, and line join. Several types of line dash patterns can be selected. They are short dot dash, long dash, short dot dash, and long dot dash. Line join can be changed to miter, bevel, and butt. Several line properties such as color can be changed. A line can be created from any point on an existing object. The shape of the line can be changed by using shape tools. These include circle, ellipse, square, and rectangle. Rasterize option is used to convert the line drawing into raster. Dimension AutoCAD supports dimension and distance management. Dimension object can be created from dimension line. Dimension line properties include line color, line style, arrow head style, and dimension line join. Line style can be selected from line color, line width, and line dash pattern. Arrow head style can be selected from arrow head color, head type, and head style. Line join is miter, bevel, or butt. The distance properties include dimension line length, dimension point location, dimension line length units, and dimension point location units. AutoCAD also supports dynamic dimensions. When dimensions are created at a dimension line, they are automatically added at existing objects and are dynamically moved with existing dimensions. Rasterize option is used to convert

the dimension drawing into raster. Freehand Freehand option is used to draw objects by using mouse or pointer. This tool is used to create straight lines, curved lines, arcs, beziers, and squares. There are several types of bezier curves available. They are quadratic, cubic, Bézier, and Trinu. A square can be created by using the square tool. There are several different types of styles for squares. They are two-point, three-point, four-point, and nine-point. There are several types of arcs such as plain, inscribed, and circumscribed.
